EDUCATION & AWARDS

Bachelor of Honours, Computing Science
University of Alberta

1st year GPA: 4.0/ 4.0
2nd year GPA: 3.7/ 4.0
3rd year GPA: 3.8/ 4.0

Scholarships

- The University of Alberta Undergraduate Scholarship (International)
- The University of Alberta Regional Excellence Scholarship
- The University of Alberta International Admission Scholarship.

SKILLS

- Python, C, SQL, HTML, Java, CSS, JavaScript
- Math tools: MATLAB, Octave
- Python packages and libraries: Scikit-learn, PyTorch, OpenCV; Web frameworks: FastAPI, React.js

EXPERIENCE

Research Trainee
May 2026 - June 2026

AI4Good Lab - Edmonton Cohort

- Participate in an AI/ML 8-week summer training program and build an impactful AI/ML project with connection and support from Amii (Alberta Machine Intelligence Institute) and Mila.
- Won the Accelerator Award, which is given to top AI prototypes that demonstrate exceptional scalability, social impact, and pitch during the lab's bootcamp.

Tutor
January 2026 - Present

University of Alberta Student's Union

- Utilize expertise in Mathematics, Statistics and Computing to assist students with their studies and improve their understanding and academic performance in different courses.
- Provide one-on-one and small-group tutoring focused on conceptual and advanced understanding.

Teaching Assistant
January 2026 - April 2026

CMPUT 204

- The course covered algorithm design and analysis, with an emphasis on the fundamentals of searching, sorting, and graph algorithms.
- Present at seminars, hosting office hours to help students with concepts and materials.

Researcher
September 2025 - December 2025

UR2PHD

- Working on designing a systematic framework that evaluates the ability of large language models supervised by Dr. Denilson Barbosa
- Taking a research training course affiliated with the Computing Research Association program

EXTRACURRICULAR ACTIVITIES

Volunteer Member International Students and Visitors Services (ISVS)
August 2025 - Present

- In the position of Student Advisory Committee, Global Education and Event volunteer.
- Assisting in setting up events and holiday parties and helping with other services

PROJECT

FEEDS (Forecasting Engine for Estimating Demand and Supply)

AI4Good Lab - Edmonton Cohort

- FEEDS is a supply and demand forecasting platform built in collaboration with multiple food banks across Alberta, using Prophet and Random Forest models trained on at least 3 to 15 years of data alongside external signals such as economic indicators and calendar events to help Alberta food banks reduce shortfalls and plan resources proactively.
- A full-stack web application with a React dashboard and Python/FastAPI backend with 3 separate models achieving 80%+ accuracy.

NeuroDash

NatHacks Hackathon 2025

- NeuroDash is a EEG-based system that enhances pediatric measurement accuracy by translating the patient's (children's) focus into a real-time signal.
- Integrated OpenBCI Ganglion EEG hardware with a Python/Pygame pipeline to process live beta-wave data and control interactive gameplay.

Evaluating LLM Performance on the Correction of Syntactic & Semantic SQL Errors in the Spider Dataset

UR2PHD Project Proposal

- Evaluated LLM robustness in correcting SQL errors using the Spider benchmark by automatically injecting controlled errors with Python, and executing large-scale batch via OpenAI and LLaMA APIs.
- Identified systematic overcorrection behaviour and consistent weaknesses in semantic error recovery showing LLMs' vulnerability in fixing complicated SQL errors.

ChicksEvent

CMPUT 301 Project

- An Android mobile app that enables fair, accessible sign-ups for high-demand community events using a lottery waiting list system.
- Built with Android Studio, UI designed in Figma, and developed collaboratively by a team of 6 using GitHub, the app integrates Firebase for real-time data, QR code event entry, and geolocation verification.

CaloBro

HackEd Hackathon 2026

- An AI-powered nutrition platform to estimate macros and calories with gamified streaks, and help users build sustainable eating habits.
- The full-stack solution features a React/FastAPI architecture with the integration of USDA API, OpenAI API (Vision) and Discord OAuth2 to provide verified data and secure access.
